

ABSTRACT

A post-surgical garment to be worn on the body of a human or animal patient. The garment includes at least one front panel and at least one back panel, at least one opening formed along the intersection of the front panel and the back panel, and at least one pocket adjacent the at least one opening. A first portion of a medical device is secured in or on the patient's body, and a second portion of the medical device is stored in a pocket of the garment with an intermediate portion of the device extending through the opening through the garment.
